

ABSTRACT

A system and device for acquiring self-generated content and determining additional data related to the self-generated content. The content acquiring device (120) may have a content input, a data input (110), and a processor (122). The data input (110) 5 acquires content, a time of acquiring the content and/or a location of acquiring the content. The data input (110) receives at least one of timeframe data and reference location data. The processor (122) is operatively coupled to the content input and the data input (110) and is utilized to determine additional data from a relation between at least one of the time 10 of acquiring the content and the location of acquiring the content, and at least one of the timeframe data and the reference location data.
